

WillowWood[®]

Foam Cover Instructions

1. To help prevent tearing the foam when it is tapered into the socket:
 - Hollow out the foam cover to accommodate the socket.
 - Cover the inside of the hollowed-out portion with glue such as Endo or a similar adhesive.
 - Allow to dry.
2. Obtain a rough shape for the foam by using a coarse sanding cone and turning the foam against the direction of the sander.
3. Smooth the foam by using a fine sanding cone and turning the foam in the same direction as the sander.
4. For the Easy-Shape AK Foam Cover, follow the above steps; additionally, hiding the glue seams will be easier if you shape around the circumference of the cover as opposed to up and down the length of the cover.
